

9
30. (Amended) The [An isolated] nucleic acid molecule of claim 28, wherein said nucleic acid encodes [comprising a nucleotide sequence encoding a retinoblastoma protein, wherein said protein has] an amino acid sequence [as] shown in FIG. 5.

B1
SUB C5
31. (Amended) A method of using a nucleic acid of any one of claims 24-30 to express a polypeptide encoded by said nucleic acid, said method comprising the steps of providing said nucleic acid in a cell or in an expression system, and expressing said polypeptide from said nucleic acid.

B2
32. (Amended) The nucleic acid [polypeptide] of claim 26 [41], wherein said nucleic acid is [polypeptide is encoded by] an allelic variant of a human retinoblastoma gene.

11
49. (New) The method of claim 22, wherein said cell sample is a human cell sample.

12
50. (New) The nucleic acid of claim 28, wherein said nucleic acid encodes a polypeptide having an amino acid sequence predicted from said open-reading frame.

B3 Sub C6
51. (New) The nucleic acid molecule of claim 26, wherein said nucleic acid has an open-reading frame, and wherein the 5' end of said open-reading frame is shown at nucleotide position 337 of the nucleotide sequence shown in FIG. 5, and the 3' end of said open-reading frame is shown at nucleotide position 2784 of the nucleotide sequence shown in FIG. 5.

14
52. (New) The nucleic acid molecule of claim 51, wherein said nucleic acid encodes a polypeptide having an amino acid sequence predicted from said open-reading frame.

REMARKS

The invention relates to retinoblastoma nucleic acids. Claims 5, 17, 32-41, and 43-48 are cancelled without prejudice.

Claims 22, 24-27, 30-31, and 42 are amended and claims 49-52 are added to more fully claim applicants' invention. The amendments to the claims are supported by the specification as
